Searching the Internet

By

Marcus P. Zillman, M.S., A.M.H.A.
Executive Director – Virtual Private Library
zillman@virtualprivatelibrary.com

This May 2008 column **Searching the Internet** is a comprehensive list of resources and sites for searching the Internet including associated and related online sources. The below list is taken from my current White Paper on Searching the Internet and is constantly updated with Subject Tracer™ bots at the following URL:

http://www.SearchingTheInternet.info/

Searching the Internet is now as common place as driving the car and most people consider the use of just one search engine to obtain results that they are looking for. This paper is designed to open your eyes to the many excellent resources on the Internet to search for information and/or to discover new knowledge! This paper will explain to you a number of ways to search for information on the Internet and methods to continue your searches and knowledge discovery. This paper is also designed for the "newbie" to the Internet or for the person who only uses one source to search for information on the Internet.

There are basically four areas to search for information on the Internet: 1) Search Engines, 2) Indexes and Directories, 3) Intuitive Search and 4) Custom Search and Deep Web Search. This paper will give a brief explanation of each area followed by some examples that you may immediately implement! The goal here is to broaden your search horizons so you may make searching the Internet easier to perform. This paper is not designed for advanced or sophisticated searching techniques as these will be addressed in other of my papers, columns and articles.

Search Engines

Search engines on the Internet are powered by "bots" that actively go out and search for meta description and keywords in files that are placed on the Internet. When you visit the search engine and type in the keyword or phrase that you are looking for the results that are generated come from the latest searching by the search engine's bots that are

1

deposited in the search engine's database. The currency of the results is purely based on when the search engine's bots visited the site and brought back the meta information to the search engine's database. There are literally thousands upon thousands of search engines on the Internet and I will list only a few of the larger and better known. I will also list a "list" of search engines all over the world so you can visit many of them to obtain a better understanding of search engines in general!

Indexes and Directories

Most individuals are accustomed to looking for information from directories and indices. This has started with the "telephone" book and then to other similar sources of directory information. The Internet also has a number of directory resources that allow you to search in a more convenient and simple format to find the information that you are looking for by going from menu to menu to menu until you find the subject and/or topic that you are looking for. Many of these are called subject trees, subject directories and are available freely over the Internet. There are literally tens of thousands of directories and subject trees on the Internet and as with Search Engines I will list some of the larger and more popular directories as well as a listing of a Directory of Directories on the Internet.

Intuitive Searching

Intuitive searching on the Internet is a fun way to look for information that could be available. By entering a name … any name into the search engine it will return potentially relevant results. This is also an excellent way to check out an individual by typing in their complete name and observing the results brought back by the search engine. Sometimes this could be very interesting. As an example with Google™ you may search for results from the Web, results from Images, results from Groups, results from Directories and results from News. All these results are available from the labeled tabs at

4

the top of each of Google's pages. Also you may take the intuitive name and add one of the basic seven domain name suffixes to it to obtain potentially relevant results:

IntuitiveName.biz
IntuitiveName.com
IntuitiveName.info
IntuitiveName.net
IntuitiveName.org
IntuitiveName.us
IntuitiveName.ws

Replace the IntuitiveName with the name that you are searching for i.e. Research or ResearchResources, etc. and add one of the suffixes above and then enter it in the URL line of your browser to see if that site exists today on the Internet. Also remember that if you have more than one word that all the words must run together to become a potential domain name (Research.com, ResearchResources.info, etc.). This could be a very interesting and valuable resource to finding information on the Internet and must be done periodically as new domain names are being created daily! If you do not find anything today it could very well be created tomorrow!!

Figure 3 Internet Alerts – InternetAlerts.info Intuitive Name Site

<u>Custom Search and Deep Web Research</u>

Searching the Internet with your own SearchBot or developing a resource list of areas of deep web search will aid you in the discovery of new information as well as going where

no search engines have traveled or fear to go! You do not need to be a Geek, Nerd or BotMaster to travel these search areas and I will list some of the highly viewed sites and resources. As the creator of BotSpot.com in 1996 I have used and visited literally hundreds of these resources on an ongoing and continuing basis or I have created these resources to aid the Internet community in discovering information and knowledge in the deep and invisible web. Here are a few of these resources:

Bot Research
